/lab_host="Pector: pSPORT1; Site_1: NotI; Site_2: SalI; The cDNA library was constructed from mRNA isolated from immature pods (approximately 2cm long) of greenhouse grown plants. The library was prepared using the Life CDNA library was prepared using the Life Technologies pSuperScript cDNA library construction kit. Complementary DNA was synthesized from mRNA using a poly(dT) sequence with a NotI restrictions site. SalI linkers adapters were ligated to the blunt-ended cDNA fragments were directionally cloned into the NotI-SalI restriction site of the pSPORT1 vector. The ligated cDNA fragments were transformed into E.coli ElectroMax DH10B host cells. This library was constructed in the laboratory of Dr. Lila Vodkin by Anu Khanna at the University of Illinios at Urbana-Champaign. email: l-vodkin@uiuc.edu"

/note="Vector: pBluescript SK-; Site_1: EcoRI; Site_2:
XhoI; Immature seeds, collected from pods ranging in age
from 25 to 35 days after pollination, were harvested from
greenhouse-grown plants. Seed were removed and separated
from pod walls and immediately frozen in liquid nitrogen.
Seeds throughout the age range were pooled for mRNA
extraction. cDNA was prepared from poly4+ enriched RNA.
The cDNA was directionally ligated into the Unizap XR
vector from Stratagene and packaged using Glgapack III
Gold packaging extracts. Plasmids containing cDNA inserts
were excised from the recombinant lambda-Zap phage using
Ex-assist helper phage and propagated in XLOLR cells."

Missouri, Columbia, MO 65211, USA

If you are interested in getting corresponding physical clones,
these are publicly available from ZmDB and may be found by BLAST
searching at MSL, maizemap.org, ZmDB, www.zmdb.iastate.edu; TIGR,
www.tigr.org, or NCBI, www.ncbi.nlm.nih.gov. When the source of the
maize cDNA sequences is either Virginia Walbot, Stanford or Pat
Schnable, Iowa State, then clones may be requested from ZmDB:
www.zmdb.iastate.edu.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                HTC 17-0CT-2002

/note="Vector: pBluescript SK-; Site_1: EcoRI; Site_2:
XhoI; cDNA was prepared from polyA+ enriched RNA from
roots harvested at 10, 17, 22, 31 and 38 days
post-inoculation with Glomus versiforme. The cDNA was
directionally ligated into the Unizap XR vector from
Stratagene and packaged using Gigapack III Gold packaging
extracts. Plasmids containing cDNA inserts were excised
from the recombinant lambda-Zap phage using Ex-assist
helper phage and propagated in XLOLR cells."

post-inoculation with Glomus versiforme. The cDNA was
directionally ligated into the Unizap XR vector from
Stratagene and packaged using Gigapack III Gold packaging
extracts. Plasmids containing cDNA inserts were excised
from the recombinant lambda-Zap phage using Ex-assist
helper phage and propagated in XLOLR cells."

/note="Organ: bud; Vector: pSport 1; Site_1: Sal1; Site_2:
Not1; VRJ is a cDNA library of Vitis riparia endodormant
buds. Endodormant buds were collected from insect and
disease free vines that were induced into dormancy with
short photoperiods. The directionally oriented library was
constructed according to Gibco BRL Superscript Plasmid
System for cDNA synthesis and plasmid cloning."

// cultivar="Medicago truncatula genotype A17"
// db_xref="taxon:119092"
// clone="pMHAM-30110"
// tissue_type="roots colonized with Glomus versiforme"
// dev_stage="Roots harvested at 10, 17, 22, 31 and 38 days post-inoculation with Glomus versiforme. The library was made from a mixture of RNA from each of these stages."
// lab_host="E. coli strain XLOLR"
// lb="Wector: pBluescript SK-; Site_1: EcoRI; Site_2: XhoI; cDNA was prepared from polyA+ enriched RNA from roots harvested at 10, 17, 22, 31 and 38 days post-inoculation with Glomus versiforme. The cDNA was directionally ligated into the Unizap XR vector from Stratagene and packaged using Gigapack III Gold packaging extracts. Plasmids containing cDNA inserts were excised from the recombinant lambda-Zap phage using Ex-assist helper phage and propagated in XLOLR cells."
                                                                                                     EST487331 MHAM Medicago truncatula/Glomus versiforme mixed EST 11-APR-2001 library cDNA clone pMHAM-30110 5' end, mRNA sequence. BG585567.1 GI:13600631

/note= "Vector: pBluescript II SK+; Site 1: EcoRI; Site 2:
XhoI; The cDNA library was constructed From mRNA isolated
from degenerating cotyledons of 2 week old seedlings from
P1468916. Complementary DNA was synthesized from mRNA
using a primer consisting of a poly(dT) sequence with a
XhoI restriction site. EcoRI adapters were ligated to the
blunt-ended cDNA fragments followed by XhoI digestion.
The cDNA fragments were directionally cloned into the
EcoRI-XhoI restriction site of the pBluescript vector. The
ligated cDNA fragments were transformed into DH10B host
cells (GibcoBRL). This library was constructed in the
laboratory of Dr. Randy Shoemaker."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          569

/clone="Wetcor: pSPORT1; Site_1: Sall; Site_2: Notl; This cDNA library was constructed from mRNA isolated from immature cotyledons of greenhouse grown plants (individual seed fresh weight of 100-300mg). The library was prepared using the Life Technologies pSuperScript cDNA library construction kit. Complementary DNA was synthesized from mRNA using a poly(dT) sequence with a NotI restriction site. Sall linkers adapters were ligated to the blunt-ended cDNA fragments followed by NotI digestion. The cDNA fragments were directionally cloned into the NotI-Sall restriction site of the pSPORT1 vector. The ligated cDNA fragments were transformed into E. coli ElectroMax DH10B host cells. This library was constructed by Dr. Lila Vodkin and Dr. Anu Khanna. Note that Gm-r1030 is a re-rack of Gm-c1007."

/note="Organ: Suspensor Region of Globular-Stage Embryos;
Vector: TriplEx2; Site_1: SfilA; Site_2: SfilB; Suspensor
regions were micro-dissected from globular-stage embryos
six days after pollination from greenhouse-grown plants
(Weterings et al., Plant Cell 13, 2409-2425 (2001)].
Double-stranded cDNA was synthesized from suspensor mRNA
using the SMART cDNA Library Construction Kit according to
the manufacturer (Clontech). The suspensor cDNA fragments
were directionally ligated into the Sfil restriction site
of the lambda TriplEx2 vector (Clontech), and the
recombinant cDNAs were transformed into E. coli XLI-Blue
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Estimations coccineus

/clone lib="Soybean induced by Salicylic Acid"
/clone lib="Soybean induced by Salicylic Acid"
/note="Vector: pBluescript SK+; Site_1: EcoR I; Site_2:
Xho I; The cDNA library was constructed by He, C-Y from
mRNA isolated from two-week seedlings (cultivar Kefeng 1)
treated by spraying 2.0mM salicylic acid for 24, 36, 48
and 72 h. Complementary DNA was synthesized from mRNA
using a primer consisting of a poly(dT) sequence with a
XhoI striction site. EcoRI adapters were ligated to the
blunt-ended cDNA fragments followed by XhoI digestion. The
cDNA fragments were directionally cloned into the
EcoRI-XhoI restriction site of the pBluescript vector. The
ligated cDNA fragments were transformed into XLI-Blue MRF'
host cells (Stratagene)."

-!- CATALYTIC ACTIVITY: Acyl-CoA + 1-acyl-sn-glycerol 3-phosphate
CoA + 1,2-diacyl-sn-glycerol 3-phosphate.
-!- PATHWAY: De novo phospholipid biosynthesis; second step.
-!- SUBCELLULAR LOCATION: Integral membrane protein (Potential).
-!- ALTERNATIVE PRODUCTS:
Event=Alternative splicing; Named isoforms=2;
                                                                                                                                                                                                                                                                                                                                                                                                                                               12;
                                                                                            SINILARITY: Belongs to the 1-acyl-sn-glycerol-3-phosphate acyltransferase family.
                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match 32.5%; Score 628; DB 1; Length 376; Best Local Similarity 37.6%; Pred.
